1.   According to the list of sites within the district (page 9 of the RFP) I counted a total of 85 locations listed. On the Erate Form 470 it states that there are 77 sites needed, and on your website, when counting the number of schools in the existing site navigation I get a different count as well.

We want to make sure that our bid for the web hosting is completely accurate, so I wanted to know how many Erate eligible school website locations there are going to be for this project. Don't include any departmental or other types of sites in the count because we don't charge for departmental or other ancillary websites, only the Erate eligible school websites.

The District will potentially need up to 85 sites or sub-domains to include schools and departments.
